

Quick Guide: Installing and Using Keyman for Windows

For Beginner Language Technology Consultants

<https://keyman.com/windows>

1. Install Keyman for Windows

1. Go to: <https://keyman.com/windows>
2. Click Download Keyman for Windows
3. Run the installer
4. Windows will prompt for admin approval-click Yes
5. Keyman will launch and appear in the system tray

Tip: Even with admin rights, Windows will prompt you to confirm installation.

2. Install a Keyboard Layout

1. Use Keyman Configuration or visit <https://keyman.com/keyboards>
2. Search for your language
3. Choose a keyboard (multiple options may be available)
4. Click Install and follow the prompts

Note: If using a .kmp file, double-click it to install.

3. Test the Keyboard

1. Open Notepad or Word
2. Click the Keyman icon and select your keyboard
3. Use Shift + Alt + K to show the on-screen keyboard
4. Type in your target language

Tip: The system tray icon shows the active keyboard.

4. Switch Between Keyboards

Method 1 - Keyman Icon: Click the icon and select another layout

Method 2 - Windows Shortcut: Try Win + Space

Tip: Alt + Shift may not work; Win + Space is more reliable.

5. Troubleshooting Tips

Issue: Keyboard doesn't appear

Solution: Restart Keyman from Start Menu

Issue: Characters incorrect
Solution: Select correct keyboard

Issue: Switching shortcut doesn't work
Solution: Use Win + Space

Issue: Special characters missing
Solution: Use on-screen keyboard (Shift + Alt + K)

Issue: Font issues
Solution: Use a Unicode-compatible font.

Setup Checklist

- [] Keyman installed successfully
- [] At least one keyboard installed and working
- [] Tested in Word or Notepad
- [] On-screen keyboard shows (Shift + Alt + K)
- [] Switching works (Win + Space)

Common Keyboard Shortcuts

Win + Space	Switch input language (Keyman + Windows)
Shift + Alt + K	Show Keyman's on-screen keyboard
Alt + Shift	Cycle between input languages (may not always work)
Ctrl + Shift + #	Set custom hotkey in Keyman Configuration
